SUMMARY

Platform and release engineer on an enterprise SaaS platform on AWS from 2021 to 2026, through its move from EC2 to Kubernetes on Amazon EKS, with customers in the US, Canada, and the UK. On the platform's DevOps team, owned the Infrastructure as Code (IaC) for the EC2 tier, ran GitOps delivery with Argo CD, and handled incident response. Builds delivery that behaves the same every run, with versioned modules and verified artifacts.

SKILLS

- **Cloud & Kubernetes:** AWS (EKS, EC2, ECS, IAM, VPC, ALB and NLB, Route 53, RDS, ElastiCache, S3, Secrets Manager, KMS), Kubernetes, Karpenter, Envoy Gateway, Linkerd, Docker, Linux
- **Infrastructure as Code (IaC):** Terraform, OpenTofu, Terragrunt, Ansible, Atlantis, module tests in Go
- **CI/CD & Release Engineering:** Argo CD (ArgoCD), GitOps, Kargo, Helm, Kustomize, Jenkins (Job DSL), GitHub Actions, AWS CodeBuild, Tekton, Bitbucket, Gerrit, Maven, SemVer, git-cliff, supply chain security (Sigstore Cosign, SBOM, build provenance)
- **Site Reliability Engineering (SRE):** production support, on-call, incident response, root cause analysis, VictoriaMetrics (Prometheus-compatible), Alertmanager, Grafana, Loki, ELK
- **Platform & Data Runtime:** Java/Spring Boot, Apache Flink, Apache NiFi, Dremio, Temporal, ActiveMQ/Artemis, Keycloak, Open Policy Agent (OPA), Aurora MySQL, MariaDB (RDS, Galera), Valkey/Redis
- **Languages & Tooling:** Python, Bash, Groovy, SQL, docs-as-code (MkDocs), AI-assisted engineering (MCP, agent workflows under contracts and gates)

EXPERIENCE

Intradiem | Application Deployment Engineer (DevOps)

Jan 2025 – Sep 2026 · United States (Remote)

Enterprise SaaS for customer-service automation, multi-region on AWS. On this platform from 2021 via Coherent Solutions, in-house from 2025.

- Owned **IaC** for the EC2 tier: **Terraform** modules for compute, load balancing, KMS, and DNS, tested in Go and released with SemVer.
- Maintained the **Terragrunt** repository and its remote state, pinning each environment to a module version. Moved the modules to **OpenTofu** in 2026 and deployed tenant environments from them through Jenkins.
- Ran **GitOps** releases and rollbacks with **Argo CD** and **Helm** on **EKS** in the US, Canada, and UK regions.
- Moved the platform from EC2 to EKS with the DevOps team through a hybrid period, and replaced Envoy proxies with **Envoy Gateway**.
- Supported releases and incidents on the **AWS** services behind those environments: VPC, EC2, EKS, ALB and NLB, RDS (Aurora MySQL and MariaDB), ElastiCache (Valkey), S3, IAM, Secrets Manager, and Route 53.
- Operated monitoring, alerting, and logging (**VictoriaMetrics**, Alertmanager, **Grafana**, and **Loki**) and responded to incidents across dev, QA, and production, from triage to root cause.
- Deployed and ran Flink, **NiFi**, Dremio, Temporal, Keycloak, and OPA on **Kubernetes**, and migrated messaging from ActiveMQ to Artemis with the team.
- Wrote the platform's deployment and operations documentation as code in **MkDocs**.
- Rolled out **CrowdStrike** on EC2 and EKS with the security team.

Coherent Solutions | DevOps Engineer (Contract)

Feb 2021 – Dec 2024 · United States (Remote)

Software engineering consultancy. Contractor on several client projects, with the Intradiem platform as the main one before its move to Kubernetes.

- Ran builds and releases on the pre-Kubernetes stack: **Jenkins** and Gerrit, EC2 with systemd and Docker behind NLB and Envoy, and ELK for logs.
- Built and maintained **CI/CD** for Java/Spring Boot (Maven), Flink, Python ML services, .NET, and Angular as declarative and scripted Jenkins pipelines managed with Job DSL.
- Built operations pipelines for migrations, scheduled jobs, and maintenance windows in **Ansible**, Bash, and Python.
- Maintained the platform's **Terraform** as it moved from a monolithic configuration to modules, and consolidated the legacy repositories into one.
- Maintained the Ansible roles that Jenkins used to deploy to the Linux and Windows fleet.
- Built Terraform, **AWS CodeBuild**, and Jenkins pipelines for other clients.

Itransition Group | IT Support Engineer

Nov 2018 – Oct 2020 · Minsk, Belarus

- Administered Linux, Windows, and macOS systems for a global software consultancy: Active Directory, backups, monitoring, and incident and problem management.

PROJECTS

Built outside work.

GitOps Release Engine

Sole author · in active development · Python (Typer, FastAPI, pytest)

- Keeps release state in Git and promotes one candidate per merge. The same image **digest** passes verification gates at each stage, and a rollback returns to a recorded state.
- Publishes its own releases as OCI images through GitHub Actions, with keyless **Sigstore Cosign** signatures, build provenance, and an **SPDX SBOM** from Syft. A separate job verifies each release by its digest.

AI-Assisted Delivery Control Plane

Sole author · MCP, Bash, Python

- Designed an operating model for engineering with AI coding agents: planning and review are kept apart from execution, and each change passes gates before a person approves the merge.
- Implemented it as repository contracts, gate scripts (secret and PII scanning, linting, and tests), and agent skills for delegation, debugging, and filing findings to a backlog.

Cally Platform | Multi-tenant B2B SaaS for event production teams

Architecture, identity, and infrastructure lead · Next.js, Keycloak, PostgreSQL, OpenTofu

- Designed the architecture and owns identity, authorization, database migrations with Flyway, **OpenTofu** infrastructure, and CI/CD to GitHub Container Registry.
- Runs identity on **Keycloak** with OpenID Connect (OIDC), managed as code with a scheduled drift check.

EDUCATION

- Bachelor's degree, Physical Education and Coaching (Tennis), Belarusian State University of Physical Culture
- Continuing education: Linux System Administration, Software Deployment (DevOps), IT Academy

ADDITIONAL

Languages: English, Russian.
