SUMMARY

Platform and release engineer with six years on one enterprise SaaS platform on AWS: about 100 services on EKS, five environment tiers, customers in the US, Canada and the UK. On the platform's DevOps team through every major migration, working across environment provisioning, GitOps delivery and incident response, and owning the infrastructure as code. Builds delivery that behaves the same every run: versioned modules, immutable digests, verified artifacts.

SKILLS

- **Cloud & Kubernetes:** AWS (EKS, EC2, ECS, IAM, VPC, Route 53, RDS, ElastiCache, S3, Secrets Manager), Kubernetes, Karpenter, Envoy Gateway, Linkerd, Docker, Linux
- **Infrastructure as Code (IaC):** Terraform / OpenTofu, Terragrunt, Ansible, Atlantis
- **CI/CD & Release Engineering:** Argo CD (ArgoCD), GitOps, Kargo, Helm, Kustomize, Jenkins, GitHub Actions, AWS CodeBuild, Tekton, Bitbucket, Gerrit, Maven, SemVer, git-cliff, supply chain security (Sigstore cosign, SBOM, build provenance)
- **Site Reliability (SRE) practices:** production support, on-call, incident response, root cause analysis, VictoriaMetrics (Prometheus), Alertmanager, Grafana, Loki, ELK
- **Platform & Data Runtime:** Java / Spring Boot, Apache Flink, NiFi, Dremio, Temporal, ActiveMQ / Artemis, Keycloak, Open Policy Agent, Aurora MySQL, MariaDB (RDS, Galera), Valkey / Redis
- **Languages & Tooling:** Python, Bash, Groovy, SQL, docs-as-code (MkDocs), AI-assisted engineering (MCP, agent workflows under contracts and gates)

EXPERIENCE

Intradiem | DevOps Engineer

Jan 2025 – Sep 2026 · United States (Remote)

Enterprise SaaS for customer-service automation. On this platform since 2021: via Coherent Solutions, then directly.

- Operated **Argo CD / GitOps** delivery for **EKS** clusters across US, Canadian and UK AWS regions. Stood up environments end to end (VPC, EKS, NLB and ALB, RDS, S3, Secrets Manager, Route 53).
- With the DevOps team, migrated delivery from EC2 to Argo CD on EKS over a hybrid EC2 and EKS period, and from Envoy proxies to **Envoy Gateway**. Ran production releases, maintenance windows, and rollbacks.
- Authored the platform's library of reusable **Terraform modules** (compute, networking, load balancing, tenant provisioning) with tests, examples, and SemVer releases. Moved the library to **OpenTofu** in 2026.
- Built the **Terragrunt** live repository that consumes those modules by pinned version.
- Ran incident response across dev, QA, and production for release, configuration, and infrastructure failures, from triage to resolution and root cause analysis.
- Deployed and ran platform services on Kubernetes: Flink, **NiFi** and Dremio for streaming and data, Temporal, Keycloak, OPA. Migrated messaging from ActiveMQ to Artemis.
- Operated the observability stack behind the platform's SLA: **VictoriaMetrics**, Alertmanager, **Grafana**, **Loki**, and per-service exporters for database, cache, and query health.
- Took part in moving the platform's repositories and Jenkins pipelines from Gerrit to **Bitbucket Cloud**.
- Deployed **CrowdStrike** agents on EC2 and EKS and worked with the security team on incidents.

Coherent Solutions | DevOps Engineer

Feb 2021 – Dec 2024 · United States (Remote)

Software engineering consultancy. On the Intradiem engagement 2021 to 2024.

- Operated delivery for the **Intradiem** platform on its pre-Kubernetes stack: Jenkins and Gerrit, EC2 with systemd and Docker behind NLB and Envoy, ELK.
- Maintained CI/CD for Java / Spring Boot (Maven), Flink jobs, Python ML services, and .NET and Angular front ends in declarative and scripted **Jenkins** pipelines and Job DSL.
- Maintained the platform's **Terraform** codebase through its monolith-to-modules migration and consolidated legacy repositories into one.
- Maintained the **Ansible** roles that served as the execution backend for Jenkins deployments across the Linux and Windows fleet.
- Built Terraform, **AWS CodeBuild**, and Jenkins pipelines for other client environments.

Itransition Group | IT Support Engineer

Nov 2018 – Oct 2020 · Minsk, Belarus

- Administered Linux, Windows, and macOS systems for a global software consultancy: Active Directory, backups, monitoring, incident and problem management.

PROJECTS

Built outside work.

GitOps Release Engine

Sole author · in active development · Python (Typer, FastAPI, pytest)

- Keeps release state in Git and promotes one candidate per merge: the same image **digest** passes verification gates at each stage, and rollback returns to a recorded state.
- Released as an OCI image through its own pipeline: signed with keyless **Sigstore cosign**, carrying **SPDX SBOM** (syft) and build provenance attestations. A separate job verifies each release from its digest.

AI-Assisted Delivery Control Plane

Sole author · MCP, Bash / Python

- An operating model for engineering with AI coding agents: planning and review are separated from execution, every change passes gates, and a person merges.
- Implemented as repository contracts, gate scripts (secret and PII scanning, lint, tests), and skills for delegation, debugging, and filing findings to a backlog.

Cally Platform | Multi-tenant B2B SaaS for event production teams

Architecture, identity and infrastructure lead · Next.js, Keycloak, PostgreSQL, OpenTofu

- Designed the architecture and owns identity (**Keycloak OIDC**, managed as code with a scheduled drift check), authorization, database migrations (Flyway), **OpenTofu** infrastructure, and CI/CD to GitHub Container Registry.

CERTIFICATIONS & EDUCATION

- AWS Certified Cloud Practitioner
- Bachelor's degree, Physical Education and Sport, Belarusian State University of Physical Culture
- Continuing education: Linux System Administration, Software Deployment (DevOps), IT Academy

ADDITIONAL

Languages: English, Russian.
